Question	Booklet	Sr.	No.
----------	---------	-----	-----

1002

Roll No.

OMR Sheet No.

# Ph.D.-2003

# **BIO-TECHNOLOGY ENTRANCE TEST, MARCH 2020**

Time : 2 Hours

Maximum Marks : 200

Number of Pages in this Booklet : 20

Number of Questions in this Booklet : 100

### **INSTRUCTIONS FOR THE CANDIDATES**

- (i) Check this booklet carefully for the sequence of pages and questions. If it is defective due to pages/questions missing or not in serial order or any other discrepancy it should be got replaced immediately from the invigilator within the period of 5 minutes. Afterwards neither the Question Booklet will be replaced nor any extra time will be given.
- (ii) After this verification write your Roll No. and OMR Sheet Number on this Question Booklet.
- (iii) Use only Black or Blue ball point pen.
- (iv) This paper consists of <u>100</u> multiple choice type questions. Each question has four alternative answers (a), (b), (c) and (d). <u>Only one of these alternative answer is correct</u>. You are required to darken completely the circle of correct answer in the OMR Sheet.
- (v) There is <u>no negative marking</u>.
- (vi) Do not write anything other than relevant entries or put any mark on any part of the OMR Sheet, which may disclose your identity, otherwise you will render yourself liable to disqualification.
- (vii) Use of electronic gadgets such as pager, cell phone, calculator and log table etc. is prohibited.

(viii) Rough Work may be done in the end of this booklet.

(ix) You have to return the OMR Sheet to the invigilator at the end of the examination compulsorily.

Number of Questions in this Bod let : 100

### INSTRUCTIONS FOR THE CANDIDATES

Check this booklet care faily for the sequence of pages and question. If it is defective due to a 3 "questions missing or not in social order or any other discrepancy if should be patroplaced instructiately from the unrigitator within the period of 5 minutes. Afterwards neither the Question Prochet will be replaced nor any extra time will be given.

A net this worth, atton write your Roll No. and OMR Sheet Number on this Question BootJet

This paper coasists of <u>100</u> annihipto choice type questions. Each que stora has four elternative analytic (a), (b), (c) and (d). Only one of these alternative and wer is correct. You are required to darked completely the circle of correct answer in the UMR sheet.

There is no negative marking.

to not write anything other than relevant entries or put any marks or any part of the QMR sheet, which may disclose your identity, otherwise you will a ader yourself liable to ensqualification.

state Work may be draw in the and of this bookles.

### I-Research Methodology

1. Fluorescence microscopy is based on the ability of certain molecules :

- (a) Continuously emit light of a constant wavelength
- (b) Absorb light of many different wavelengths
- (c) Absorb light of a given wavelength and then emit light of a longer wavelength
- (d) Absorb light of a given wavelength and then emit light of a shorter wavelength

2. Proteins give fluorescence because of the presence of :

- (a) Tyrosine (b) Phenylalanine
- (c) Tryptophan (d) All of these

3. Fourier transform is used in NMR. What is its importance?

- (a) Convert electronic transition into signal
- (b) Convert time domain free induction decay pattern to frequency
- (c) Used to calculate chemical shift
- (d) Used to calculate spin-spin splitting

4. Electrophoretic procedure which does not depend on the charge of a protein is :

- (a) Moving boundary electrophoresis (b)
- b) Isoelectric focussing
- (c) SDS-PAGE (d) All of these

5. The PI (isoelectric point) of a protein is 6. At pH 7, when electric field is applied, the protein :

- (a) Moves towards anode (b) Moves towards cathode
- (c) Does not move (d) Moves randomly
- 6. Antibodies are separated by the :
  - (a) Isopyenic centrifugation
  - (c) Zonal centrifugation
- (b) Differential centrifugation
- (d) None of these

Ph.D.-2003/60/KD/2

(3)

7.	Cell	disruption	of	microbial	cells	can	be	carried	out	by	:	
----	------	------------	----	-----------	-------	-----	----	---------	-----	----	---	--

- (a) Sucrose gradient centrifugation (b) Ultrafiltration
- (c) Sonication (d) Ultracentrifugation
- 8. DNA binding protein can be detected by :
  - (a) Western blotting (b) Eastern blotting
  - (c) Northern blotting (d) South-Western blotting

9. Which of the following technique is used to study protein-protein interaction?

- (a) CHIP assay (b) Yeast one hybrid system
- (c) Yeast two hybrid system (d) All of these

10. Ethidium bromide is used to visualize nucleic acid because :

- (a) It makes covalent bond with nucleic acid and fluorescences at 302 nm
- (b) It stacks between bases
- (c) Ethidium bromide gives fluorescence which is detected by UV-illuminator
- (d) Ethidium bromide-nucleic acid complex increase the fluorescence of the ethidium bromide

11. The molecular weight of an unknown protein can be best determined by :

- (a) Ion-exchange chromatography (b) Centrifugation
- (c) Mass spectroscopy (d) Affinity chromatography
- 12. On the completion of isoelectric focussing the net charge on a protein is :
  - (a) Positive (b) Ne
    - (b) Negative

(4)

Intermediate

- (c) Zero (d)
- Ph.D.-2003 / 60 / KD / 2

- 13. TEM can be used for the study of :
  - (a) Topology of bacteria
  - (b) Internal structure of bacteria
  - (c) For both topology and internal structure of bacteria
  - (d) None of these standards and the second standards the second standard
- 14. The instrument used to draw clear magnified sketches of objectives under microscope is :
  - (a) Compound microscope (b) Light microscope
  - (c) Camera Lucida (d) Camera attached stereomicroscope

15. When the power of ocular lens is 10X and objective lens is 20X, the magnification is :

- (a) 30 times (b) 20 times
- (c) 200 times (d) 2000 times
- 16. Which of the following is a desired characteristic of the organism to be used for industrial applications?
  - (a) Should produce high amount of product
  - (b) Should grow rapidly
  - (c) Should be readily available
  - (d) All of these
- 17. Which of the following algae is used for the production of single cell proteins?
  - (a) Spirullina

(b) Caulerpa

Ascophyllum

Sterilization of medium

[P.T.O.

2/4

(c) Anabaena

(d)

(5)

- 18. Which of the following is downstream processing?
  - (a) Product recovery (b) Screening
  - (c) Medium formulation (d)
- Ph.D.-2003/60/KD/2

19. What are GLPs?

- (a) Good manufacturing practices
- (c) Both (a) and (b)

- (b) A quality assurance system
- (d) None of these

(a) Wide area network
(b) Local area network
(c) Global network
(d) Peer to peer network

21. Every computer connected to internet is identified by a unique four-part string, known as :

(a) IP address
(b) Host name
(c) Domain name
(d) None of these

20. A network of computer and other devices that is confined to a relatively small space is called :

tour and the

- 22. Which of the following sector/sectors comes under intellectual property rights?
  - (a) Patents (b) Trademarks
- (c) Copyright (d) All of these

23. Ni-column is used for the purification of :

- (a) His tag protein (b) GST tag protein
- (c) Negatively charged protein (d) Carbohydrates

24. Concentration of cytokine secreting cell can be measured by :

- (a) RIA (b) ELISA
- (c) Eli-spot (d) All of these

25. Which of the following fluorescent probe is used to monitor the progresss of amplification in Real time PCR?

(6)

(a)	Rhodamine	(b) FITC	

(c) Cyan blue (d) SYBR green

26. A particular cell type of a heterogenous mixture of cell types can be isolated by :

- (a) Antibody affinity chromatography
- (b) Density gradient centrifugation
- (c) Differential centrifugation
- (d) High performance liquid chromatography
- 27. The unique feature of the enzyme Taq polymerase used in PCR is :
  - (a) High speed (b) High fidelity
  - (c) High thermal stability (d) Low thermal stability

28. Antigen interaction with antibody is measured by :

- (a) ELISA (b) RIA
- (c) Immunodiffusion (d) All of these
- 29. Reverse phase chromatography is known for its :
  - (a) Separation of non-polar molecules
    (b) Use of non-polar mobile phase
    (c) Use of polar mobile phase
    (d) None of these
- 30. Distance between active site and allosteric site is determined by :
  - (a) CD(b) COSY(c) FRET(d) NMR
- 31. A column packed with sieve particles is used in which of the following technique to separate smaller and larger protein molecules :

(7)

[P.T.O.

- (a) Affinity chromatography
- (b) Gel electrophoresis
- (c) Molecular exclusion chromatography
- (d) All of these

- 32. Isoelectric focussing technique used to separate proteins works on the principle of :
  - (a) Electrophoretic separation based on relative content of acidic and basic residues
  - (b) Mass of protein molecules
  - (c) Number of amino acids containing sulphur
  - (d) Coagulation capacity of protein molecules

33. Maxam Gilbert and Sanger dideoxy methods are concerned with :

- (a) DNA amplification (b) DNA damage
- (c) DNA repair (d) DNA sequencing

#### 34. In autoradiography :

- (a)  $\beta$ -particles are used to expose silver halide grains of film
- (b)  $\alpha$ -particles are used to expose silver halide grains of films
- (c) Both (a) and (b)
- (d) None of these.

35. Sucrose gradient centrifugation can be used to estimate the size of :

- (a) Proteins (b) RNA molecules
- (c) Ribosomes (d) Ribosomal subunits

36. Aeration in a bioreactor is provided by :

- (a) Impeller (b) Baffles
- (c) Sparger (d) All of these
- **37.** The selection of an appropriate purification method in the product recovery after microbial fermentation depends upon :
  - (a) Nature and stability of the end product produced
  - (b) Type of the side products present
  - (c) Degree of purification required
  - (d) All of these.

	(a)	Air flow rate	(d)				
	(b)	Diameter of the impeller					
	(c)	Agitation speed		ology and similarity	example of hore		
	(d)	Volumetric mass transfer coefficie	nt (d)		PROSPRCT

## II-Subject Specific-Biotechnology

51.	Whi	ich one of the following is an exam	nple o	fa	conjugated protein?	Holigibion au		
	(a)	Casein		(b)	Albumin			
	(c)	Globulin	(	( <b>d</b> )	Globin	ie ou igni inci	an a	
		RNA and prototo synitesis				oitcoile agus mu		- 1995. 
52.	Nuc	leic acids have multiple negative ch		due				
	(a)	Sugars	(	(b)	Phosphoryl group	S		
	(c)	Associated protein	(	(d)	Purine & Pyrimid	ines		
53.	Cho	lestrol is the precursor of :				1.igase		
	(a)	Progesterone	(	<b>b</b> )	Testosterone			
	(c)	Estradiol & Cortisol	(d) (	d)	None of these			
54.	Who	o discovered the penicillin?						
	(a)	Robert Koch		b)	Alexander Fleming			
	(c)	Louis Pasteur	6 (	d)	A.V. Leeuwenhoel			
55	How	many hastaria an evoluted in fac				1	6vH	
55.		many bacteria are produced in fou			If a dacterium divid		an hou	ur?
	(a)	8	(1	<b>b</b> )	64 bend not neurice of			
	(c)	128	(	d)	256			
56.	The	protein coat of virus is called :						
	(a)	Capsomeres	(1	b)	Prions			
	(c)	Viriod	(0)	d)	Capsid			
			(6)					
Ph.	020	03/60/KD/2	(11	)			[P.]	T.O.

57.	Akt2	belongs to :		II-Subject 5	
	(a)	Hedgehog signalling	(b)	Insulin receptor signalling	
	(c)	Hippo signalling	(d)	NF-kB signalling	
58.	Balh	iani rings are sites of :			
001	(a)	DNA replication	(b)	RNA and protein synthesis	
	(c)	Synthesis of lipids		Synthesis of polysaccharides	
	(	Plosphorvi enorge		(s) Sugars	
59.	The	enzyme that breaks H <sub>2</sub> bonds in DN		(c) Associated protein	
	(a)	Helicase	(b)	Topoisomerase	
	(c)	Ligase	(d)	Polymerase	
				Cholestrol is the precursor of :	
60.	Whi	ch of the radioisotope of iodine is ge	enerally	used in autoradiography technique?	
	(a)	127I some of these	(b)	(c) Estadiol & Control 1251	
	(c)	126I	(d)	<sup>114</sup> I	
61.	Nun	aber of subunits of protein is determine	ned by	Who discovered die pericillin?	
	(a)	SDS-PAGE	(b)	Native PAGE	
	(c)	Reducing SDS-PAGE	(d)	Gel filtration	
62.	Hyd	rophobic interaction chromatography	has a c	haracteristic step :	
	(a)	Uses hydrophobic solvent for bindin	ng	2 (s)	
	<b>(b)</b>	Uses hydrophilic solvent for binding	g		
	(c)	Uses hydrophilic solvent for elution	(D)		
	(d)	All of these			
				The protein coat of virus is called	
63.	Clo	ning vectors with the transcription and	l transl	ation signals are called : (a)	
	(a)	Plasmid vector	(b)	Expression vector	
	(c)	pBR322	(d)	pUC	
Ph.	D20	03/60/KD/2	(12)	-2003/60/K0/2	

- 64. Regulated unit of genetic engineering is :
  - Operator gene (a) (b) Promoter gene
  - (c) **Regulator** gene
- Operon (d)

65. Site directed mutagenesis is also known as :

- Mononucleotide directed mutagenesis (a)
- **(b)** Polynucleotide directed mutagenesis
- (c) Dinuleotide directed mutagenesis
- Oligonucleotide directed mutagenesis (d)

66. Which of the following has been produced commercially from mammalian culture?

- (a) Plasminogen activator Antibacterial antibody **(b)**
- (c) Insulin  $(\mathbf{d})$ Rennin

67. Which of the following mice are used for immunization in the Hybridoma technology?

- Swiss mice (a) **(b)** Balb/c mice
- Out bred mice (c) (d) Indigenous mice

68. In the term "He La Cell Lines", He La stands for :

- (a) The tissue of origin (b) The patient name and type of cancer
- (d) Patient name. (c) Type of cancer
- 69. The most widely used chemical for protoplast fusion, as fusogen is :
  - (a) Manitol

Polyethylene glycol (PEG) **(b)** 

S (P.T.O.

Sorbitol (c)

Glycerol (d)

Ph.D.-2003/60/KD/2

11

70.	Vari	ations observed during tissue culture of	of some	e plants are known as :	
	(a)	Clonal variations	(b)	Somatic variations	
	(c)	Somaclonal variations	(d)	Tissue culture	
71.	Plan	ts developed in-vitro culture from pol	len gra	ins are:	
	(a)	Androgenic haploids	(b)	Pollen plants	
	(c)	Male plants	(d)	Sterile plants	
				(c) Dinifeotide ducefed numgenesis	
72.	Whi	ich among the following is not a sequ	ience d	ata bank?	
	(a)	GenBank	(b)	DNA data bank of Japan	
	(c)	SWISS-PROT	(d)	Protein data bank	
		Antibacterist and pody			
73.	FAS	STA program was first described by :			
	(a)	Lipmann and Pearson	(b)	Adachi and Hasegawa	
	(c)	Fitch and Margoliash	(d)	Kyte and Dolittle	
				Which of the following mice are used (	
74.	BL	AST and FASTA are used for :			
	(a)	Global similarity	(b)	End free space alignment	
	(c)	Local similarity	(d)	Gap penalty	
75.	Wh	o coined the term "Zymase" for enzyr	nes in	yeast :	
	(a)	Kuhne			
	(c)	Louis Pasteur	(d)	Edward Buchner	
76.	Nor	n-protein part of an enzyme is known		The most widely used chemical for pro-	
	(a)	Holoenzyme	(b)	Apoenzyme (8)	
	(c)		(b) (d)	Isoenzyme	
Dh	D .20	003/60/KD/2	(14)	D-2003/80/1KDV2	

- 77. Enzymes which are slightly different in molecular structure, but can be perform identical activity are called :
  - (a) Isoenzymes

(b) Holoenzymes

(c) Apoenzymes

(d) Coenzymes

- 78. Plant secondary metabolites :
  - (a) Help to increase the growth rate of plant
  - (b) Help in plant reproduction processes
  - (c) Provide defence mechanisms against microbial attack
  - (d) Make the plant susceptible to unfavourable conditions.
- 79. Which of the following methods of plant transformation can be used to introduce a gene into chloroplast genome?
  - (a) Agrobacterium-mediated transformation
  - (b) Particle delivery system
  - (c) Permeabilization
  - (d) Electroporation.
- 80. Hormone which controls cell division and cell differentiation is :
  - (a) ABA (b) Auxin
  - (c) Gibberllin

(d) Cytokinin

81. The process by which DNA of nucleus passage genetic information to mRNA :

(15)

- (a) Translocation (b) Transcription
- (c) Translation

(d) Transporation

[P.T.O.

Ph.D.-2003/60/KD/2

1 1

				Enzymes which are slightly different in m we called :	
	(a)	Nitrous acid	(b)	Colchicine	
	(c)	5-Bromouracil	(d)	Caffeine	
83.	How	w many nucleosomes are found	in helical coi	1 of 30 nm chromatin fiber :	
	(a)	10	(b)	12 Pant secondary-metabolites : 21	
	(c)	06	(d)	a) Help to increase the growth rate01	
				b) Help in plant reproduction processe	
84.	The	immunity which shows delayed	d type of hyp	ersensitivity is :	
	(a)	Cell mediated immunity	(b)	Humoral immunity	
	(c)	Antibody immunity	(d)	ADCC	
85.		unoglobulin which is expressed	d on B1 cell	which of the following methods of plant is :	
	(a)	IgG	(b)	IgA	
	(c)	IgM	(d)	IgD	
86.	The	humoral immune response is t	he aspect of i	animentidenmest	
	(a)	Antibodies	(b)	Antigen	
		Dendritic cells	(d)	Macrophages	
				formone which controls cell division and	
	Hyb	ridoma technology is used to j	produce :		
87.		Monoclonal antibody	(b)	Polyclonal antibody	
87.	(a)	DIGL			
87.	(a) (c)	Both (a) and (b)	(d)	B-cells	
	(c)	Both (a) and (b)	ກາວແລ້ງ ອຽກະສ	B-cells	
87. 88.	(c)	Both (a) and (b)	to introduce	B-cells	
	(c) Whi	Both (a) and (b) ich of these would not be used	to introduce (b)	B-cells DNA in animal cells?	

89.	The	e product commercially produced by	animal	cell culture is : and oneg to boy dardy
	(a)	Insulin	(b)	Tissue plasminogen activator
	(c)	Interferon	(d)	Hepatitis-B vaccine
90.	Eth	anol concentration is lowest in :	•	
	(a)	Wine	(b)	Beer
	(c)	Brandy	(d)	
01				
91.		ich of the following organism is use	d for co	ommercial production of citric acid?
	(a)	Penicillium chrysogenum	(b)	Pseudomonas aeruginosa
	(c)	Aspergillus niger	(d)	Xanthomonas campestris
92.		teria commonly used for the product	tion of a	lcohol is :
	(a)	E. coli	(b)	Zymomonas
	(c)	Pseudomonas	(d)	All of these
93.	Sten	a cells are :		9. Bioremediation can clean up polluted soil
	(a)	Cells from stem of plants	(b)	Cells in bone marrow
	(c)	M-cells of intestinal epithelium	(d)	Dendrites des los set settersonal (d)
		activity by exuding energy comp		in lios stationis of statis rolling and the
94.	In E	LISA test result is determined by me	easuring	the thirdsphere
	(a)	Intensity of the colour	(b)	Intensity of radioactivity
	(c)	Change in chemilumiscence	(d)	Diameter of precipitin ring
95.	Intell	ectual property rights of inventions	are prote	ected by :
	(a)	Copyright	(b)	Design
	(c)	Patent	(d)	All of these
Ph.D	200	3/60/KD/2	(17)	.O.T.9] 2003 / 60 / KD / 2

- 96. Which type of genomics, studies the physical nature of genomes?
  - (a) Comparative genomics (b) Structural genomics
    - (0) 2000000 800
  - (c) Functional genomics

(d) None of these

97. Proteomics is :

- (a) A branch of quantum physics
- (b) A study of algal genome
- (c) The study of entire collection of proteins expressed by an organism
- (d) None of these

98. Which one of the following is a National agency for regulations of food products in India?

(a)	IFFCO	(b)	FSSAI
(c)	USDA	(d)	USFDA

99. Bioremediation can clean up polluted soils by :

- (a) Adding nutrients to stimulate the activity of certain soil bacteria.
- (b) Inoculating the soil with certain bacteria that can degrade toxic organic compounds.

(18)

- (c) Using plants to stimulate soil microbial activity by exuding energy compounds in the rhizosphere
- (d) All of these

100. The first successful use of gene therapy was in :

- (a) Genetic diseases (b) Cancer
- (c) Endocrine disorders (d) Cardiovascular disease
