	Max. Marks:100(70(T)+30(P)) Internal Assessment Marks:30(20(T)+10(P)) End Term Exam Marks: 70(50(T)+20(P))  Time: 3 Hrs.(T), 3Hrs.(P)					
Part	<b>B-</b> Contents of the	Course				
Instructions for Paper- Setter						

The examiner will set a total of nine questions. Out of which first question will be compulsory. The remaining eight questions will be set from four units, selecting two questions from each. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Overview of C: History, Importance, Structure of C Program, Character Set, Constants and Variables, Identifiers and Keywords, Data Types, Assignment Statement, Symbolic Constant. Input/output: Formatted I/O Function-, Input Functions viz. scanf(), getch(), getche(), getchar(), gets(), output functions viz. printf(), putch(), putchar(), puts().	11
II	Operators & Expression: Arithmetic, Relational, Logical, Bitwise, Unary, Assignment, Conditional Operators and Special Operators Operator Hierarchy; Arithmetic Expressions, Evaluation of Arithmetic Expression, Type Casting and Conversion. Decision making with if statement, ifelse statement, nested if statement, else-if ladder, switch and break statement, goto statement, Looping Statements: for, while, and dowhile loop, jumps in loops.	11
III	Arrays: One-dimensional arrays - Declaration, Initialization, and Memory representation; Two-Dimensional arrays -Declaration, Initialization and Memory representation. Functions: definition, prototype, function call, passing arguments to a function: call by value; call by reference, recursive functions. Strings: Declaration and Initialization, String I/O, Array of Strings, String Manipulation Functions: String Length, Copy, Compare, Concatenate, etc., Search for a Substring.	12
IV	Pointers in C: Declaring and initializing pointers, accessing address and value of variables using pointers; Pointers, and Arrays.  User-defined data types: Structures - Definition, Advantages of Structure, declaring structure variables, accessing structure members, Structure members initialization, Array of Structures; Unions - Union definition; the difference between Structure and Union.	11
V*	Practicum: Students are advised to do laboratory/practical practice not limited to, but including the following types of problems:	30

- To read the radius of a circle and to find the area and circumference
- To read three numbers and find the biggest of three
- To check whether the number is prime or not
- To read a number, find the sum of the digits, reverse the number, and check it for palindrome
- To read numbers from the keyboard continuously till the user presses 999 to find the sum of only positive numbers
- To read the percentage of marks and to display an appropriate message (Demonstration of else-if ladder)
- To find the roots of the quadratic equation
- To read marks scored by n students and find the average of marks (Demonstration of the single dimensional array)
- To remove Duplicate Elements in a single dimensional Array
- To perform addition and subtraction of Matrices
- To find the factorial of a number
- To generate Fibonacci series
- To remove Duplicate Elements in a single dimensional Array
- To find the length of a string without using the built-in function
- To demonstrate string functions
- To read, display, and add two m x n matrices using functions
- To read a string and to find the number of alphabets, digits, vowels, consonants, spaces, and special characters
- To Swap Two Numbers using Pointers
- To demonstrate student structure to read & display records of n students
- To demonstrate the difference between structure & union.

#### **Suggested Evaluation Methods**

#### **Internal Assessment:**

#### > Theory

• Class Participation: 5

• Seminar/presentation/assignment/quiz/class test etc.: 5

• Mid-Term Exam: 10

#### > Practicum

• Class Participation: NA

• Seminar/Demonstration/Viva-voce/Lab records etc.: 10

• Mid-Term Exam: NA

## End Term Examination:

A three-hour exam for both theory and practicum.

#### **Part C-Learning Resources**

Examiner will set a total of nine questions. Out of which first question will be compulsory. Remaining eight questions will be set from four unit selecting two questions from each unit. The

examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Computer Fundamentals: Evolution of Computers through generations, Characteristics of Computers, Strengths and Limitations of Computers, Classification of Computers, Functional Components of a Computer System, Applications of Computers in Various Fields. Types of Software: System software, Application software, Utility Software, Shareware, Freeware, Firmware, Free Software. Memory Systems: Concept of bit, byte, word, nibble, storage locations, and addresses, measuring units of storage capacity, access time, the concept of the memory hierarchy. Primary Memory - RAM, ROM, PROM, EPROM. Secondary Memory - Types of storage devices, Magnetic Tape, Hard Disk, Optical Disk, Flash Memory.	11
II	I/O Devices: I/O Ports of a Desktop Computer, Device Controller, Device Driver. Input Devices: classification and use, keyboard, pointing devices - mouse, touchpad and trackball, joystick, magnetic stripes, scanner, digital camera, and microphone Output Devices: speaker, monitor, printers: classification, laser, inkjet, dot-matrix. Plotter.  Introduction to Operating System: Definition, Functions, Features of Operating System, Icon, Folder, File, Start Button, Task Bar, Status Buttons, Folders, Shortcuts, Recycle Bin, Desktop, My Computer, My Documents, Windows Explorer, Control Panel.	12
III	The Internet: Introduction to networks and Internet, history, Internet, Intranet & Extranet, Working of Internet, Modes of Connecting to Internet.  Electronic Mail: Introduction, advantages and disadvantages, User IDs, Passwords, e-mail addresses, message components, message composition, mailer features. Browsers and search engines.	11
IV	Threats: Physical & non-physical threats, Viruses, worms, Trojans, Spyware, Keylogers, Rootkits, Adware, Cookies, Phishing, Hacking, Cracking.  Computer Security Fundamentals: Confidentiality, Integrity, Authentication, Non-Repudiation, Security Mechanisms, Security Awareness, Security Policy, anti-virus software & Firewalls, backup & recovery.	11

V*	Practicum:	30
	Students are advised to do laboratory/practical practice not limited to,	
	but including the following types of problems:	
	Operating System:	
	Starting with basics of Operating Systems and its functionalities	
	Computer Basics:	
	<ul> <li>Identify the various computer hardware</li> </ul>	
	Understanding the working of computer	
	Understanding various types of software	
	Internet and E-mail:	
	<ul> <li>Using Internet for various tasks</li> </ul>	
	Creating and using e-mail.	
	Security:	
	<ul> <li>Understanding various threats</li> </ul>	
	<ul> <li>How to be safe from virus threats</li> </ul>	
	<ul> <li>Various software to get safe from virus attacks.</li> </ul>	
	Suggested Evaluation Methods

The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Number Systems: Binary, Octal, Hexadecimal, etc. Conversions from one number system to another, BCD Number System. BCD Codes: Natural Binary Code, Weighted Code, Self-Complimenting Code, Cyclic Code.  Error Detecting and Correcting Codes. Character representations: ASCII, EBCDIC, and Unicode.  Number Representations: Integer numbers - sign-magnitude, 1's & amp; 2's complement representation. Real Numbers normalized floating point representations.	11
II	Binary Arithmetic: Binary Addition, Binary Subtraction, Binary Multiplication, Binary Division using 1's and 2's Compliment representations, Addition and subtraction with BCD representations. Boolean Algebra: Boolean Algebra Postulates, basic Boolean Theorems, Boolean Expressions, Boolean Functions, Truth Tables, Canonical Representation of Boolean Expressions: SOP and POS, Simplification of Boolean Expressions using Boolean Postulates & Theorems, Kaurnaugh-Maps (upto four variables), Handling Don't Care conditions.	11
III	Logic Gates: Basic Logic Gates – AND, OR, NOT, Universal Gates – NAND, NOR, Other Gates – XOR, XNOR, etc. Their symbols, truth tables, and Boolean expressions.  Combinational Circuits: Design Procedures, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Multiplexers, Demultiplexers, Decoder, Encoder, Comparators, Code Converters.	11
IV	Sequential Circuits: Basic Flip-Flops and their working. Synchronous and Asynchronous Flip-Flops, Triggering of Flip-Flops, Clocked RS, D Type, JK, T type, and Master-Slave Flip-Flops. State Table, State Diagram, and State Equations. Flip-flops characteristics & Excitation Tables. Sequential Circuits: Designing registers –Serial-In Serial-Out (SISO),	12

	Serial-In Parallel-Out (SIPO), Parallel-In Serial-Out (PISO) Parallel-In Parallel-Out (PIPO) and shift registers.	
V*	Practicum: Students are advised to do laboratory/practical practice not limited to, but including the following types of problems: Number System:  • Problems based on Number System and their conversion.  • Programs based on Number System conversion.  Binary Arithmetic  • Problems based on Binary Arithmetic.  • Programs based on Binary Arithmetic.  • Problems based on Boolean Expression and their simplification  Logic Gates  • Understanding working of logic Gates.  Combinatorial Circuits:  • Designing and understanding various combinational circuits.  Sequential Circuits:  • Designing and understanding various sequential circuits.	30

Unit	Topics	Contact Hours
Ι	Sets and their representations, Empty sets, Finite and infinite sets, Subsets, Equal sets, Power sets, Universal sets, Union and intersection of sets, Difference of two sets, Complement of a set, Venn diagram, De-Morgan's laws, and their applications.	4
II	An introduction to matrices and their types, Operations on matrices, Symmetric and skew-symmetric matrices, Minors, and Co-factors. Determinant of a square matrix, Adjoint and inverse of a square matrix, Solutions of a system of linear equations up to order 3.	4
III	Quadratic equations, Solution of quadratic equations. Arithmetic progression, Geometric progression, Harmonic progression, Arithmetic mean (A.M.), Geometric mean (G.M.), Harmonic mean (H.M.), Relation between A.M., G.M. and H.M.	3
IV	The concept of differentiation, differentiation of simple functions, and Use of differentiation for solving problems related to real-life situations. Differentiation of simple algebraic, trigonometric, and exponential functions.	4
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  Problem Solving- Questions related to the practical problems based on the following topics will be worked out and a record of those will be maintained in the Practical Note Book:  • Problems related to union, intersection, difference and complement of sets.	30

- Problems based on De Morgan's Laws.
- Problems related to Venn diagrams.
- Problems to find the inverse of a matrix.
- Problems to find the determinant of a square matrix of order 3.
- Problems to find the nth term of A.P., G.P., and H.P.
- Problems to find the sum of n terms of A.P., G.P., and H.P.
- Problems to find A.M., G.M., and H.M. of given numbers.
- Problems involving formulation and solution of quadratic equations in one variable.
- Problems to find the first derivatives of functions.

Scheme: 2023-24, Syllabus: 2023-24				
Part A - Introduction				
Subject	BCA	BCA		
Semester	III	III		
Name of the Course	Java OOP Foundati	Java OOP Foundations		
Course Code	B23-CAP-301	B23-CAP-301		
Course Type: (CC/MCC/MDC/CC- M/DSEC/VOC/DSE/PC/AEC/ VAC)	CC-A3			
Level of the course (As per Annexure-I	200-299			
Pre-requisite for the course (if any)	Knowledge of any Computer Programming Language			
Course Learning Outcomes(CLO):	After completing this course, the learner will be able to:  1. Implement simple Java programs.  2. Implement multiple inheritance using Interfaces  3. Implement Exception Handling and File Handling.  4. Use AWT to design GUI applications.  5* develop the project using java.			
Credits	Theory	Practical	Total	
	3	1	4	
Contact Hours	3	2	5	
Max. Marks:100(70(T)+30(P)) Internal Assessment Marks:30(2 End Term Exam Marks: 70(50(T	0(T)+10(P)) Γ)+20(P))	Time: 3 Hrs.(T),	3Hrs.(P)	

#### **Part B- Contents of the Course**

#### **Instructions for Paper-Setter**

The examiner will set a total of nine questions. Out of which first question will be compulsory. The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first

question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Object Oriented Programming and Java Fundamentals: Structure of Java programs, Classes and Objects, Data types, Type Casting, Looping Constructs.	11
II	Interfaces: Interface basics; Defining, implementing, and extending interfaces; Implementing multiple inheritance using interfaces Packages: Basics of packages, Creating and accessing packages, System packages, Creating user-defined packages	11
III	Exception handling using the main keywords of exception handling: try, catch, throw, throws, and finally; Nested try, multiple catch statements, creating user-defined exceptions. File Handling Byte Stream, Character Stream, File I/O Basics, File Operations	11
IV	AWT and Event Handling: The AWT class hierarchy, Events, Event sources, Event classes, Event Listeners, Relationship between Event sources and Listeners, Delegation event model, Creating GUI applications using AWT.	12
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • WAP to find the sum of 10 numbers, entered as command line arguments.  • WAP to find the area of rectangle and circle using Interface.  • WAP to implement multiple inheritance.  • WAP to show the concept of packages.  • WAP to handle the Exception using try and multiple catch blocks and a finally block.  • WAP for Implementing Calculator in an Applet, use appropriate Layout Manager.  • Write Applet code to add two integers in textbox and their sum should appear in third textbox.  • Write AWT program in Java to find the sum, Multiplication and average of three numbers entered in three Text fields by clicking the corresponding Labeled Button. The result should be appearing in fourth text field.	30

- Write Applet code to show all the activities of Mouse using Mouselistener and MouseMotionlistener.
- What are various stream classes in Java? Write Java code to read character from a file and write into another file.
- What are AWT Classes? Write a Java Program to generate Even numbers and Odd Numbers in TextField "T1 and T2 respectively" while pressing Buttons "Even" and "Odd".
- Write a program to Copy the text from one file to another using byte stream.

#### **Suggested Evaluation Methods**

#### **Internal Assessment:**

#### > Theory

• Class Participation: 5

• Seminar/presentation/assignment/quiz/class test etc.: 5

• Mid-Term Exam: 10

#### > Practicum

• Class Participation: NA

• Seminar/Demonstration/Viva-voce/Lab records etc.: 10

• Mid-Term Exam: NA

## End Term Examination:

A three-hour exam for both theory and practicum.

The examiner will set a total of nine questions. Out of which first question will be compulsory.

The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Introduction to Linux: Linux distributions, Overview of Linux operating system, Linux architecture, Features of Linux, Accessing Linux system, Starting and shutting down system, Logging in and Logging out, Comparison of Linux with other operating systems.	11
II	Commands in Linux: General-purpose commands, File oriented commands, directory-oriented commands, Communication-oriented commands, process-oriented commands, etc. Regular expressions & Filters in Linux: Simple filters viz. more, wc, diff, sort, uniq, grep; Introducing regular expressions.	11
III	Linux file system: Linux files, inodes and structure and file system, file system components, standard file system, file system types. Processes in Linux: Starting and Stopping Processes, Initialization Processes, Mechanism of process creation, and Job control in Linux using at, batch, cron & time.	11
IV	Shell Programming: vi editor, shell variables, I/O in shell, control structures, loops, subprograms, creating & executing shell scripts in Linux.	12
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems:  • Basic Linux command  • Basic Shell Programming (Fibonacci Series generation, Factorial of a given number, Checking for Armstrong number)  • Designing an Arithmetic calculator  • Generation of Multiplication table  • Base Conversion (Decimal to Binary, Binary to Decimal)  • Finding the information about the Login name and File name.  • Write a shell script to exchange the contents of two variables.  • Write a shell script, which accepts three subject marks scored by a student and declare the result.  • Write a shell script program to find area of a square,	30

rectangle, circle and triangle.  • Write a shell script to print integer numbers from 1 to 20	).

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Introduction to Data Science: Definition, importance, and applications. Overview of Excel: Interface, basic functions, and features. Data Types and Formats in Excel: Text, numbers, dates, and custom formats. Basic Data Manipulation: Sorting, filtering, and basic formulas (SUM, AVERAGE, COUNT).	11
II	Data Import and Export: CSV, TXT, and Excel files. Data Cleaning Techniques: Handling missing values, duplicates, and errors. Data Transformation: Text-to-columns, concatenation, and data validation. Data Visualization: Creating and customizing charts (bar, line, pie).	11
III	Descriptive Statistics: Mean, median, mode, standard deviation, and variance. Inferential Statistics: Hypothesis testing, t-tests, and chi-square tests. Regression Analysis: Simple linear regression and multiple regression. Predictive Modeling: Introduction to basic predictive models and their implementation in Excel.	11
IV	Advanced Excel Functions: VLOOKUP, HLOOKUP, INDEX-MATCH, and PivotTables. Data Analysis ToolPak: Using Excel's built-in data analysis tools such as Descriptive Statistics, Histograms, Correlation, and Regression. What-If Analysis Tools: Scenario Manager, Goal Seek, and Data Tables.	12
V*	<ul> <li>The following activities will be carried out/ discussed in the lab during the semester.</li> <li>Familiarize with Excel interface and basic operations.</li> <li>Explore Excel ribbons, toolbars, and interface.</li> <li>Practice data entry, formatting, and basic calculations.</li> <li>Create a simple spreadsheet and perform basic functions.</li> <li>Import data and perform basic cleaning tasks.</li> </ul>	30

- Import datasets from CSV and text files.
- Identify and handle missing values.
- Remove duplicates and correct data errors.

Manipulate data through sorting and filtering.

- Apply sorting to datasets based on different criteria.
- Use filters to analyze subsets of data.
- Create custom filters to extract specific data points.

Utilize formulas for data transformation.

- Practice text functions: LEFT, RIGHT, MID, CONCATENATE.
- Use date functions: TODAY, DATE, DATEDIF.
- Implement basic mathematical formulas: SUM, AVERAGE, COUNT.

Calculate and interpret descriptive statistics.

- Calculate measures of central tendency: mean, median, mode.
- Compute measures of dispersion: range, variance, standard deviation.
- Use built-in Excel functions for statistical analysis.

Apply conditional formulas and formatting.

- Use IF, SUMIF, and COUNTIF functions for conditional analysis.
- Apply conditional formatting to highlight data trends and anomalies.
- Create data-based rules for formatting.

Create and customize basic charts and graphs.

- Generate line charts, bar charts, and pie charts.
- Customize chart elements: titles, labels, and legends.
- Analyse data visually through chart types.

Summarize data using PivotTables.

- Create PivotTables to aggregate data.
- Group data and create custom summaries.
- Utilize slicers to filter and analyze PivotTable data interactively.

Apply lookup and reference functions.

- Use VLOOKUP and HLOOKUP for data retrieval.
- Implement INDEX and MATCH functions for advanced lookups.
- Practice using the OFFSET function for dynamic data ranges.

Perform statistical analysis using the Data Analysis Toolpak.

- Install and activate the Data Analysis Toolpak.
- Conduct regression analysis and ANOVA.
- Explore other statistical tests available in the Toolpak.

The examiner will set a total of nine questions. Out of which first question will be compulsory. The remaining eight questions will be set from four units selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions, selecting one from each unit. The first question will be compulsory.

Unit	Topics	Contact Hours
I	Introduction to back-end Development: Overview of backend, Client-server architecture, Introduction to web servers and database  Programming Languages and Tools: Introduction to server-side languages (e.g., Node.js), Syntax and semantics of chosen server-side language	11
II	Programming Languages: Version control with Git, Introduction to IDEs (Integrated Development Environments) of chosen language, Writing and executing basic server-side scripts  Performance Optimization and Security: Caching strategies, Query optimization	11
III	<b>Database Management:</b> Introduction to databases and DBMS (SQL and NoSQL), Designing a database schema, CRUD operations (Create, Read, Update, Delete), Connecting applications to a database	11
IV	Server-Side Frameworks: Overview of popular server-side frameworks (e.g., Express.js), Building a simple application using a framework.  API Development: RESTful API concepts, Designing and documenting APIs, Authentication and authorization basics Web security best practices (SQL injection, XSS, CSRF)	12
V*	The following activities be carried out/ discussed in the lab during the initial period of the semester.  Programming Lab:  Introduction to Backend Technologies: Objective: Familiarize students with backend technologies and tools.  Setup development environment (e.g., IDE, Git).  Create a simple "Hello World" backend application in Node.js.  Working with Databases (SQL): Objective: Learn basic SQL operations and database interactions.  Set up MySQL/PostgreSQL database.  Perform CRUD operations using SQL queries (Create, Read, Update, Delete).  Working with NoSQL Databases: Objective: Introduce students to NoSQL databases.  Set up MongoDB database.  Implement CRUD operations using NoSQL commands.  Building RESTful APIs: Objective: Develop skills in designing and implementing RESTful APIs.	30
	o Create endpoints for CRUD operations.	

- o Implement basic authentication and authorization.
- Web Frameworks (Choose one: Node.js or Express.js): Objective: Gain practical experience with backend frameworks.
  - o Setup Node.js/Express.js project.
  - Implement a simple web application (Express.js or Node.js).
- Integrating Frontend and Backend: Objective: Understand frontend-backend interaction.
  - o Create API endpoints to serve JSON data.
  - Develop a frontend (HTML/CSS/JavaScript) to consume backend API.
- Data Validation and Error Handling: Objective: Learn techniques for validating input data and handling errors.
  - Implement input validation using middleware (Express.js) or Node.js forms.
  - o Handle errors and exceptions gracefully.
- Security Best Practices: Objective: Implement security measures in backend applications.
  - o Implement HTTPS/SSL configuration.
  - Prevent common security vulnerabilities (e.g., SQL injection, XSS).

Level of the course (As per Annexure-I	300-399		
Pre-requisite for the course (if any)	Basic Knowledge of	of computer	
Course Learning Outcomes(CLO):	After completing this course, the learner will be able to:  1. Understand the basic concepts and principles of computer networks.  2. Describe the analog and digital communication concepts.  3. Evaluate different data link layer designs and LAN technologies.  4. Analyze the various routing algorithms and know about the application layer.  5*. Use networking infrastructure and its applications.		
Credits	Theory	Practical	Total
	3	1	4
Contact Hours	3	2	5
Max. Marks:100(70(T)+30(P)) Internal Assessment Marks:30(2 End Term Exam Marks: 70(50(		Time: 3 Hrs.(T),	3Hrs.(P)

### **Instructions for Paper-Setter**

The examiner will set a total of nine questions. Out of which first question will be compulsory. Remaining eight questions will be set from four unit selecting two questions from each unit. The examination will be of three-hour duration. All questions will carry equal marks. The first question will comprise short answer-type questions covering the entire syllabus.

The candidate must attempt five questions in all, selecting one question from each unit. The first question will be compulsory.

Part B- Contents of the Course			
Unit	Topics	Contact Hours	
I	Introduction to Data Communication and Computer Networks; Uses of Computer Networks; Types of Computer Networks and their Topologies; Network Hardware Components: Connectors, Transceivers, Repeaters, Hubs, Network Interface Cards and PC Cards, Bridges, Switches, Routers, Gateways; Network Software: Network Design issues and Protocols; Connection-Oriented and Connectionless Services; OSI Reference Model; TCP/IP Model	11	
II	Analog and Digital Communications Concepts: Analog and Digital data and signals; Bandwidth and Data Rate, Capacity, Baud Rate; Guided and Wireless Transmission Media; Communication Satellites; Switching and Multiplexing; Modems and modulation techniques	11	
III	Data Link Layer Design issues; Error Detection and Correction methods; Sliding Window Protocols: One-bit, Go Back N, and Selective Repeat; Media Access Control: ALOHA, Slotted ALOHA, CSMA, Collision free protocols; Introduction to LAN technologies: Ethernet, Switched Ethernet, Fast Ethernet, Gigabit Ethernet; Token Ring; Introduction to Wireless LANs and Bluetooth;	11	
IV	Routing Algorithms: Flooding, Shortest Path Routing, Distance Vector Routing; Link State Routing, Hierarchical Routing; Congestion Control; Traffic shaping; Choke packets; Load shedding; Application Layer: Introduction to DNS, E-Mail, and WWW services; Network Security Issues: Security attacks; Encryption methods; Firewalls; Digital Signatures;	12	
V*	<ul> <li>The following activities be carried out/ discussed in the labduring the semester.</li> <li>Programming Lab: <ul> <li>Experiment Study of different types of Network cables and Practically implement the cross-wired cable and straight-through cable using a clamping tool.</li> <li>Study of Network Devices in Detail.</li> <li>Study of network IP.</li> <li>Connect the computers to the Local Area Network.</li> <li>Performing an Initial Switch Configuration Performing an Initial Router Configuration</li> <li>To study about components and specifications of Laptops and Desktop.</li> <li>Familiarization with networking components and devices LAN adapter, Hub, Switches, Routers, etc.</li> <li>Familiarization with Transmission media and tools: Co-axial cable, UTP cable, Crimping tool, Connectors, etc.</li> <li>Introduction to various interior and exterior routing protocols.</li> <li>Study of various LAN topologies and their creation using network devices, cables, and Computer.</li> <li>Configuration of TCP/IP protocols in Window/LINUX.</li> </ul> </li> </ul>	30	

Suggested Evaluation Methods

Unit	Topics	Contact
		Hours

	·	
I	Introduction to Python: Python Interpreter, Python as calculator, Python shell, Indentation, identifier and keywords, literals, strings, Operators: Arithmetic, Relational, Logical, comparison, Bitwise, Assignment, Identity operator and Membership operator; Input & output statements; Control statements: Branching, looping, Conditional statement, Exit function	11
II	String Manipulations: Subscript operator, indexing, slicing a string, other functions on strings, string module. Strings and number system: Format functions, converting strings to numbers & Vice Versa. List, Tuples, Sets, Dictionaries: Basic list operators, replacing, inserting, removing an element, searching, Sorting lists, dictionary literals, adding & removing keys, accessing & replacing values, traversing dictionaries.	11
III	Array in Python, Design with Functions: hiding redundancy, complexity, arguments & return values; Formal/Actual arguments, named arguments, program structure and design, Recursive functions, scope & Global statements, Importing modules, Math modules & Random modules.	11
IV	Exception Handling: Exceptions, except clause, try and finally clause, user-defined exceptions.  File Handling: Manipulating files & directories, OS & SYS modules, Reading, writing text & numbers from/to file.  Graphics: "Turtle" module, drawing colors, shapes, digital images, income file formers.	12
	image file formats.	
V*	<ul> <li>Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems: <ul> <li>WAP to find the roots of a quadratic equation.</li> <li>WAP to accept a number 'n' and (a). Check if 'n' is prime (b). Generate all prime numbers till 'n' (c). Generate first 'n' prime numbers (d). This program may be done using functions.</li> <li>WAP that accepts a character and performs the following: (a). print whether the character is a letter, numeric digit, or special character (b). if the character is a letter, print whether the letter is uppercase or lowercase (c). if the character is a numeric digit, print its name in the text (e.g., if the input is 9, the output is NINE)</li> <li>WAP to perform the following operations on a string (a). Find the frequency of a character in a string. (b). Replace a character by another character in a string. (c). Remove the first occurrence of a character from a string.</li> <li>WAP to swap the first n characters of two strings.</li> <li>Write a function that accepts two strings and returns the indices of all the occurrences of the second string in the first string as a list. If the second string is not present in the first string, then it should return -1.</li> <li>WAP to create a list of the cubes of only the even integers appearing in the input list (may have elements of other types</li> </ul></li></ul>	30
	appearing in the input list (may have elements of other types also) using the following: (a). 'for' loop (b). list comprehension	

- WAP to read a file and (a). Print the total number of characters, words, and lines in the file. (b). Calculate the frequency of each character in the file. Use a variable of dictionary type to maintain the count. (c). Print the words in reverse order. (d). Copy even lines of the file to a file named 'File1' and odd lines to another file named 'File2'.
- Write a function that prints a dictionary where the keys are numbers between 1 and 5 and the values are cubes of the keys.
- Consider a tuple t1= (1, 2, 5, 7, 9, 2, 4, 6, 8, 10). WAP to perform the following operations: (a). Print half the values of the tuple in one line and the other half in the next line. (b). Print another tuple whose values are even numbers in the given tuple. (c). Concatenate a tuple t2= (11,13,15) with t1. (d). Return maximum and minimum values from this tuple
- WAP to accept a name from a user. Raise and handle the appropriate exception(s) if the text entered by the user contains digits and/or special characters.

### **Suggested Evaluation Methods**

### **Internal Assessment:**

### **➤** Theory

• Class Participation: 5

• Seminar/presentation/assignment/quiz/class test etc.: 5

• Mid-Term Exam: 10

#### > Practicum

• Class Participation: NA

• Seminar/Demonstration/Viva-voce/Lab records etc.: 10

• Mid-Term Exam: NA

## **End-Term Examination:** A three-hour exam

for both theory and practicum.

End Term Exam Marks: 70(50(T)+20(P)

Unit	Topics	Contact Hours
I	Introduction to Data Science: Definition, importance, and applications. Overview of Python: Python programming basics, data types, and structures. Introduction to Python Libraries: NumPy, pandas, and matplotlib. Basic Data Manipulation: Reading and writing data files, basic operations with pandas DataFrame.	11
II	Data Import and Export: Handling CSV, Excel, and other file formats. Data Cleaning Techniques: Handling missing values, duplicates, and data inconsistencies. Data Transformation: Data type conversion, normalization, and scaling. Data Visualization: Creating and customizing plots using matplotlib and Seaborn.	11
III	Descriptive Statistics: Calculating mean, median, mode, standard deviation, and variance using pandas. Inferential Statistics: Conducting hypothesis testing, t-tests, and chi-square tests. Regression Analysis: Implementing simple linear regression and multiple regression using scikit-learn. Predictive Modeling: Introduction to basic predictive models such as decision trees and logistic regression.	11
IV	Advanced Python Libraries: Exploring advanced pandas, NumPy, and scikit-learn features. Data Analysis Tools: Time series analysis, clustering, and classification using scikit-learn. What-If Analysis Tools: Sensitivity analysis and scenario analysis using Python.	12
V*	Practicum: Students are advised to do laboratory/practical practice not limited to but including the following types of problems: Introduction to Python for Data Science  • Setting up the Python environment (Anaconda, Jupyter Notebook)  • Introduction to libraries: NumPy, pandas, Matplotlib, and Seaborn  Data Manipulation with pandas  • Importing and exporting data  • Data cleaning and preprocessing  • Data transformation and aggregation  Data Visualization  • Creating basic plots with Matplotlib  • Advanced visualization with Seaborn  Exploratory Data Analysis (EDA)  • Descriptive statistics and data summarization	30

- Detecting and handling missing values
- Identifying patterns and correlations in data

### **Descriptive Statistics**

- Implementing regression using Sci-kit learn
- Implementing predictive modelling and decision tress
- Implementing basic statistics and various tests used in statistics
- Implementing various data analysis tools
