

CC-H1 B23-MAT-701 REAL ANALYSIS

With effect from the Session: Scheme 2023-24, Syllabus 2025-26	
Part A - Introduction	
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics
Semester	VII
Name of the Course	REAL ANALYSIS-II
Course Code	B23-MAT-701
Course Type	CC-H1
Level of the course	400-499
Pre-requisite for the course (if any)	Courses on Real Analysis up to the 299 level
Course Objectives	The course aims to familiarize the learner with Riemann-Stieltjes integral, uniform convergence of sequences and series of functions, functions of several variables and Fourier series.
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>CLO 1: Understand the concept of Riemann-Stieltjes integral along its properties; integration of vector-valued functions with application to rectifiable curves.</p> <p>CLO 2: Understand and handle convergence of sequences and series of functions; construct a continuous nowhere-differentiable function; demonstrate understanding of the statement and proof of Weierstrass approximation theorem.</p> <p>CLO 3: Understand the concepts of differentiability and continuity of functions of several variables and their relation to partial derivatives; apply the knowledge to prove inverse function theorem and implicit function theorem.</p> <p>CLO 4: To formulate convergence problems of Fourier series, know about the $(C,1)$ summability of Fourier series and apply these notions to prove the well-known Fejer theorem, Bessel's inequality, Riesz-Fischer theorem, Parseval equality and Riemann-Lebesgue</p>

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Definition and existence of the Riemann-Stieltjes integral, properties of the integral, integration and differentiation, the fundamental theorem of calculus, integration of vector-valued functions, rectifiable curves. (Scope as in Chapter 6 of 'Principles of Mathematical Analysis' by Walter Rudin, Third Edition).	15
II	Sequences and series of functions: Pointwise and uniform convergence of sequences of functions, Cauchy criterion for uniform convergence, Dini's theorem, uniform convergence and continuity, uniform convergence and Riemann integration, uniform convergence and differentiation. (Scope as in Sections 9.1 to 9.3 of Chapter 9 'Methods of Real Analysis' by R.R. Goldberg). Convergence and uniform convergence of series of functions, Weierstrass M-test, integration and differentiation of series of functions, existence of a continuous nowhere-differentiable function, the Weierstrass approximation theorem (Scope as in Sections 9.4, 9.5, 9.7 of Chapter 9 & Section 10.2 of Chapter 10 of 'Methods of Real Analysis' by R.R. Goldberg).	15
III	Functions of several variables: Linear transformations, the space of linear transformations on \mathbb{R}^n to \mathbb{R}^m as a metric space, open sets, continuity, derivative in an open subset of \mathbb{R}^n , chain rule, partial derivatives, continuously differentiable mappings, the contraction	15

	principle, the inverse function theorem, the implicit function theorem. (Scope as in relevant portions of Chapter 9 (up to 9.29) of ‘Principles of Mathematical Analysis’ by Walter Rudin, Third Edition)	
IV	Fourier Series: Formulation of convergence problems, the necessary and sufficient condition for the Fourier series for f at x to converge to $f(x)$, The $(C,1)$ summability of Fourier series, Fejer theorem, The L^2 theory of Fourier series, Bessel’s inequality, Riesz Fischer theorem, Parseval’s equality, convergence of Fourier series, Riemann-Lebesgue theorem, Orthonormal expansions in $L^2[a, b]$, Bessel’s inequality for generalized Fourier series. (Scope as in Chapter 12 of ‘Methods of Real Analysis’ by R.R. Goldberg).	15

CC-H2 B23-MAT-702 COMPLEX ANALYSIS

With effect from the Session: Scheme 2023-24, Syllabus 2025-26			
Part A - Introduction			
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics		
Semester	VII		
Name of the Course	COMPLEX ANALYSIS		
Course Code	B23-MAT-702		
Course Type	CC-H2		
Level of the course	400-499		
Pre-requisite for the course (if any)	Courses on Real Analysis up to the 299 level		
Course Objectives	The main objective of the course is to familiarize the learner with complex function theory, analytic functions theory, the Cauchy's theorems, integral formulas, singularities and contour integrations and finally provide a glimpse of Argument principle; Rouche's theorem; Schwarz Lemma.		
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>CLO 1: Understand the concepts of limit, continuity, differentiation and integration for functions defined over a complex plane as well as for the elementary functions.</p> <p>CLO 2: Solve the complex integrals of various kinds through the applications of relevant theorems, formulae and power series expansions.</p> <p>CLO 3: Analyse the complex functions with singularities for zeroes and residues at poles and apply the results to solve the improper integrals.</p> <p>CLO 4: Solve complex improper integrals through the indentation, transformation/mapping of integration paths so as to avoid singularities and branch points/cuts.</p>

The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Analytic functions; Harmonic functions; Reflection principle; Elementary functions: Exponential, Logarithmic, Trigonometric, Hyperbolic, Inverse trigonometric, Inverse hyperbolic, Complex exponents; Complex Integration: Definite integral; Contours; Branch cuts. (Relevant portions from the book recommended at Sr. No. 1)	15
II	Cauchy-Goursat theorem; Simply/ multiply connected domains; Cauchy integral formula; Morera's theorem; Liouville's theorem; Fundamental theorem of algebra; Maximum modulus principle; Power series: Taylor series; Laurent series; Uniform/ absolute convergence. (Relevant portions from the book recommended at Sr. No. 1)	15
III	Differentiation, integration, multiplication, division of power series; Singularities; Poles; Residues; Cauchy's residue theorem; Zeros of an analytic function; Evaluation of improper integrals; Jordan's lemma. (Relevant portions from the book recommended at Sr. No. 1)	15
IV	Indented paths; Integration along a branch cut; Definite integrals involving sines and cosines; Winding number of closed curve; Argument principle; Rouché's theorem; Schwarz Lemma ; Transformations: linear, bilinear (Möbius), sine, z^2 , $z^{1/2}$; Mapping: Isogonal; Conformal; Scale factors; Local inverses; harmonic conjugates. (Relevant portions from the book recommended at Sr. No. 1)	15

CC-H3 B23-MAT-703 Theory of Ordinary Differential Equations

With effect from the Session: Scheme 2023-24, Syllabus 2025-26	
Part A - Introduction	
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics
Semester	VII
Name of the Course	Theory of Ordinary Differential Equations
Course Code	B23-MAT-703
Course Type	CC-H3
Level of the course	400-499
Pre-requisite for the course (if any)	Courses on Differential Equation and Real Analysis up to the 299 level
Course Objectives	<p>The objectives of this course are to study the existence and uniqueness theory of solutions of initial value problems, to study theory of homogeneous and non-homogeneous linear differential equations of higher order in detail, to learn about oscillations of second order differential equations, and solving boundary value problems.</p> <p>The aim of the course is to form a strong foundation in the theory of ordinary differential equations enabling a learner to apply towards problem solving.</p>
<p>Course Learning Outcomes (CLOs)</p> <p>After completing this course, the learner will be able to:</p>	<p>CLO 1: Understand concepts of an initial value problem and its exact and approximate solutions, existence of solutions, uniqueness of solutions and continuation of solutions of an initial value problem of order one. Apply the knowledge to prove specified theorems and to solve relevant exercises</p> <p>CLO 2: Have deep understanding of theory of linear differential equations of higher order by getting knowledge of basic theory, Wronskian theory and fundamental sets, adjoint equations and standard theorems related to these topics. Apply methods of reduction of order and variation of parameters to solve linear and non-linear differential equations respectively and to solve higher order linear differential equations with constant coefficients.</p> <p>CLO 3: Understand preliminary, oscillation and Sturm' theory of</p>

Chairman
Deptt. of Mathematics
K.U. KURUKSHETRA

	<p>second order ordinary differential equations and comparison theorems. Apply this knowledge to solve problems of checking second order ODEs for oscillatory, finding common zeros and applying Prüffer transformation.</p> <p>CLO 4: Have good understanding of boundary value problems of second order, their classification and solution. Appreciate the concept of Green's function. Attain skills to solve boundary value problems which find great applications in areas of applied mathematics, science and engineering.</p>

DSE-6 B23-MAT-704 MECHANICS OF SOLIDS

With effect from the Session: Scheme 2023-24, Syllabus 2025-26	
Part A - Introduction	
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics
Semester	VII
Name of the Course	Mechanics of Solids
Course Code	B23-MAT-704
Course Type	DSE-6
Level of the course	400-499
Pre-requisite for the course (if any)	Courses on Vector Calculus and Differential Calculus
Course Objectives	In this course, basic theory of mechanics of solids is introduced. First, the laws of transformations and tensors will be introduced. Mathematical theory of deformations, analysis of strain and analysis of stress in elastic solids will be learnt next. A student will also learn basic equations of elasticity and variational methods. In this course, the students will be exposed to the mathematical theory of elasticity and other techniques which find applications in areas of civil, structural, and mechanical engineering, Earth Sciences and Material sciences. This course in Applied Mathematics will provide a sound base and open gates for doing research in the number of areas involving solid mechanics.
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>CLO 1: Understand the concepts of tensors as a generalized form of directional entities and to know their properties through the operations of algebra and calculus.</p> <p>CLO 2: Understand affine transformation and infinitesimal deformation analysis of strain and stress tensors. Have a strong foundation to learn theory of elasticity to solve scientific problems.</p> <p>CLO 3: Relate strain tensor and stress tensor through anisotropic</p>

 Chairman
 Deptt. of Mathematics
 K.U. KURUKSHETRA

	<p>elastic moduli, subjected to reflection/rotational symmetries to define elastic isotropy, and using theorems/ principles to explore the role of these relations in strain energy, compatibility conditions and uniqueness of solution.</p> <p>CLO 4: Learn variational methods to solve boundary value problems in elasticity. Learn to prove standard theorems related to theory of variational problems and to apply these techniques/methods by minimizing the potential / strain / complementary energies to solve scientific problems in mechanics of solids and get exposed to research problems in the field of elasticity. Also to understand phenomenon of wave propagation in infinite elastic medium.</p>

DEC-6 B23-MAT-705 Differential Geometry

With effect from Session: Scheme 2023-24; Syllabus 2025-26			
Part A – Introduction			
Name of Programme	M.Sc. Mathematics		
Semester	VII		
Name of the Course	Differential Geometry		
Course Code	B23-MAT-705		
Course Type	DEC		
Level of the course	400-499		
Pre-requisite for the course (if any)	Courses on Differential and Vector Calculus		
Course Objectives	Differential geometry is a discipline that uses the techniques of differential calculus, vector calculus and linear algebra to study problems in geometry and the mathematical analysis of curves and surfaces in space is studied in this course. The objective is to learn about curves in space and other related concepts; surfaces, envelopes, developable surfaces; curves on surfaces; and Geodesics.		
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>1: Understand concepts of curves in space and other related concepts like tangent, principal normal, curvature, binormal, torsion, centre of curvature, spherical curvature, involutes, evolutes, Bertrand curves and to solve related problems.</p> <p>2: Understand and distinguish surfaces and their characteristics, developable surfaces, family of surfaces and curvilinear coordinates. Demonstrate knowledge to solve related problems of geometry.</p> <p>3: Learn about curves on surfaces, conjugate systems, asymptotic lines, isometric lines, null lines etc. and minimal curves.</p> <p>4: Derive equations of Gauss and Codazzi, Mainardi-Codazzi relations and Bonnet's theorem. Understand concepts of geodesics and curves in relation to geodesics and apply knowledge in problem solving.</p>

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.		
Unit	Topics	Contact Hours
I	Curves: Tangent, principal normal, curvature, binormal, torsion, Serret-Frenet formulae, locus of center of curvature, spherical curvature, locus of centre of spherical curvature, curve determined by its intrinsic equations, helices, spherical indicatrix of tangent, etc., involutes, evolutes, Bertrand curves.	15
II	Envelopes and Developable Surface : Surfaces, tangent plane, normal. One parameter family of surfaces; Envelope, characteristics, edge of regression, developable surfaces. Developables associated with a curve; Osculating developable, polar developable, rectifying developable. Two parameter family of surfaces; Envelope, characteristic points and examples. Curvilinear Coordinates, First order magnitudes, directions on a surface, the normal, second order magnitudes, derivatives of \mathbf{n} , curvature of normal section, Meunier's theorem.	15
III	Curves on a surface : Principal directions and curvatures, first and second curvatures, Euler's theorem, Dupin's indicatrix, the surface $z = f(x, y)$, surface of revolution. Conjugate systems; conjugate directions, conjugate systems. Asymptotic lines, curvature and torsion. Isometric lines; isometric parameters. Null lines, minimal curves.	15
IV	The equations of Gauss and of Codazzi: Gauss's formulae for r_{11}, r_{12}, r_{22} , Gauss characteristic equation, Mainardi-Codazzi relations, alternative expression, Bonnet's theorem, derivatives of the angle ω . Geodesics: Geodesic property, equations of geodesics, surface of revolution, torsion of a geodesic. Curves in relation to Geodesics; Bonnet's theorem, Joachimsthal's theorems, vector curvature, geodesic curvature, Bonnet's formula.	15

Name of the Course	Programming Lab -1		
Course Code	B23-MAT-706		
Course Type	PC-H1		
Level of the course	400-499		
Pre-requisite for the course (if any)			
Course objectives	This is a theory and laboratory course and objective of this course is to acquaint the students with the syntax and tools of MATLAB/SCILAB/Octave for problem solving.		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Learn data types, operators, expressions, statements and functions of MATLAB.</p> <p>CLO 2: Learn working with matrices and the operations thereon, matrix functions, algebraic operations on arrays and multivariate data, Input / Output functions and files in MATLAB.</p> <p>CLO 3: Learn if-else, switch and case, loop, multidimensional arrays structures in MATLAB.</p> <p>CLO 4: Learn scripts and Functions, Function handling and different plotting Functions of MATLAB.</p>		
CLO 5 is related to the practical component.	CLO 5: Learn the practical skills to implement the above mentioned programming concepts through MATLAB/SCILAB/Octave software.

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Introduction: Basics of programming; Anatomy of a program; Constants; Characters; Variables; Data types; Assignments; Operators; functions; Examples of expressions; Entering long statements; Command line editing. Good programming style. Working with vectors: Defining a Vector, Accessing elements within a vector, Basic operations on vectors; Mathematical functions; Strings; String functions; Cell array; Creating cell array; Concatenation.	7
II	Working with Matrices: Generating matrices; Mathematical operations and functions; Deleting rows /columns; Linear algebra; Arrays; Multivariate data; Scalar expansion; Logical subscripting; Input and output: Save/Load functions, M-files, The find function; The format function; Suppressing output.	8
III	Flow Control: if and else, switch and case, for loop, while loop, continue, break, try – catch, return. Data Structures: Multidimensional arrays; Cell arrays, Characters and text; Structures.	7
IV	Introduction to Scripts and Functions, Function handles. Basic Plotting Functions: Creating a plot; Multiple data sets in one graph; Specifying line styles and colors; Plotting lines and markers; Imaginary and complex data; Adding plots to existing graph; Figure windows; Multiple plots in one figure; Controlling the axes; Axis labels and titles; Saving	8

figures.	
Practicals	Contact Hours
Instructions for Paper- Setter: The examiner will set 3 questions at the time of practical examination by taking course learning outcomes (CLOs) into consideration. The examinee will be required to write and execute 2 programs.	
The following practicals will be done using MATLAB/SCILAB/Octave and record of those will be maintained in the practical Note Book:	90
<ol style="list-style-type: none"> 1. Use of nested <i>if.. else</i> in finding the smallest of four or more numbers. 2. To find if a given 4-digit year is a leap year or not. 3. Create any 4 x 3 matrix A. Do the following steps: <ol style="list-style-type: none"> (a) Get those elements of A that are located in rows 3 to 4 and columns 2 to 3 (b) Add a fourth column to A and interchange that with the first column of A; replace the last 3 x 3 sub-matrix of A (rows 2 to 4, columns 2 to 4) by a 3 x 3 identity matrix; delete the first and third rows of A and then string out all elements of A in a row and transpose it at the end. 4. Use switch...case to calculate the income tax on a given income at the existing rates. 5. To compute the arithmetic mean, geometric mean and harmonic mean for the values $\{x(j), j=1,2,\dots,n\}$ and the corresponding frequencies $\{f(j), j=1,2,\dots,n\}$. 6. Write a function file factorial to compute the factorial $n!$ for any integer n. The input should be the number n and the output should be $n!$. 7. Write a function using for ... loop or a while ... loop to compute the sum of a geometric series $1 + r + r^2 + r^3 + \dots + r^n$ for a given r and n. 8. Write function for the greatest common divisor (GCD) of two given positive integers and use it to find the least common multiple (LCM) of three given positive integer values and to find GCD of more than two integers. Get the result using built-in functions as well. 9. Compute simple interest and compound interest for a given amount, time period, rate of interest and period of compounding. 10. Program to multiply two given matrices in a user defined function. 11. For given perimeter and number of sides, plot the polygon and calculate its area. 12. Solve a cubic equation or quartic equation with given coefficients and verify the solution through built-in function. 13. Plot a circle for given centre and a point on the boundary. Find its perimeter and area. 14. Identify the location of a given point (x, y) in terms of (a) at origin, (b) on x-axis or y-axis, (c) in quadrants I, II, III or IV. Verify through x-y plot. 15. Given a function $f(x) = \sin(x)$, write a MATLAB script that computes 	

the Taylor series expansion of the function around a point x_0 up to the n terms. Evaluate the Taylor series at a set of points. Plots the original function and its Taylor series approximation on the same graph for comparison.

Suggested Evaluation Methods

Internal Assessment:

➤ Theory 15

- Class Participation: 4
- Seminar/presentation/assignment/quiz/class test etc.: 4
- Mid-Term Exam: 7

➤ Practicum 15

- Class Participation: 5
- Seminar/Demonstration/Viva-voce/Lab records etc.: 10
- Mid-Term Exam:

End Term Examination:

Theory 35

Written Examination

Practicum 35

Lab record, viva-voce, written examination and execution of the programs.

CC-H4 B23-MAT-801 ABSTRACT ALGEBRA

With effect from the Session: Scheme 2023-24, Syllabus 2025-26	
Part A - Introduction	
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics
Semester	VIII
Name of the Course	ABSTRACT ALGEBRA
Course Code	B23-MAT-801
Course Type	CC-H4
Level of the course	400-499
Pre-requisite for the course (if any)	Courses on Algebra up to the level 299.
Course Objectives	The concept of a group is surely one of the central ideas of Mathematics. The main aim of this course is to introduce Sylow theory and some of its applications to groups of smaller orders. An attempt has been made in this course to strike a balance between the different branches of group theory, abelian groups, nilpotent groups, finite groups, infinite groups and to stress the utility of the subject. A study of modules, submodules, quotient modules, finitely generated modules etc. is promised in this course. Similar linear transformations, Nilpotent transformations and related topics are also included in the course.
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>CLO 1: Understand concepts of normal subgroup, quotient group, isomorphism, automorphism, conjugacy, G-sets, normal series, composition series, solvable group, nilpotent group and refinement theorem.</p> <p>CLO 2: Learn about cyclic decomposition, alternating group A_n, simplicity of A_n for $n \geq 5$, Sylow's theorem and its applications.</p> <p>CLO 3: Understand concepts of modules, submodules, direct sum, R-homomorphism, quotient module, completely reducible modules, free modules, representation of linear mappings and their ranks.</p>

Chairman
Deptt. of Mathematics
K.U. KURUKSHETRA

	CLO 4: Learn about similar linear transformation, triangular form, nilpotent transformation, primary decomposition theorem, Jordan form, rational canonical form and elementary divisors.

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist of 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Normal subgroup, quotient group, normalizer and centralizer of a non-empty subset of a group G , commutator subgroups of a group. first, second and third isomorphism theorems, correspondence theorem, $\text{Aut}(G)$, $\text{Inn}(G)$, automorphism group of a cyclic group, G -sets, orbit of an element in group G , Cayley's theorem. conjugate elements and conjugacy classes, class equation of a finite group G and its applications, Burnside theorem. normal series, composition series, Jordan Holder theorem, Zassenhaus lemma, Scheier's refinement theorem, solvable group, nilpotent group. (Chapter 5 and 6 of recommended book at Sr. No. 1, Chapter 5 of recommended book at Sr. No. 2)	15
II	Cyclic decomposition, even and odd permutation, Alternation group A_n , simplicity of the Alternating group A_n ($n \geq 5$). Cauchy's theorem, Sylow's first, second and third theorems and its applications to group of smaller orders. groups of order p^2 and pq ($q > p$). (Chapter 7, 8.4 and 8.5 of recommended book at Sr. No 1)	15
III	Modules, submodules, direct sums, finitely generated modules, cyclic module. R -homomorphism, quotient module, completely reducible modules, Schur's lemma, free modules, representation of linear mapping, rank of linear mapping. (Chapter 14 of recommended book at Sr. No 1)	15

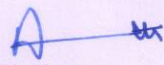

Chairman
Deptt. of Mathematics
K.U. KURUKSHETRA

IV	Similar linear transformation, invariant subspaces of vector spaces, reduction of a linear transformation to triangular form, nilpotent transformation, index of nilpotency of a nilpotent transformation. Cyclic subspace with respect to a nilpotent transformations, uniqueness of the invariants of a nilpotent transformation. Primary decomposition theorem. Jordan blocks, Jordan canonical forms, cyclic module relative to a linear transformation, rational canonical form of a linear transformation and its elementary divisors, uniqueness of elementary divisors. (6.4. to 6.7 of recommended book of Sr. No. 3).	15

CC-H5 B23-MAT-802 TOPOLOGY

With effect from the Session: Scheme 2023-24, Syllabus 2025-26	
Part A - Introduction	
Name of Programme	B.Sc. /B.A. (Hons.) Mathematics Or B.Sc. /B.A. (Hons. with Research) Mathematics
Semester	VIII
Name of the Course	TOPOLOGY
Course Code	B23-MAT-802
Course Type	CC-H5
Level of the course	400-499
Pre-requisite for the course (if any)	Courses on Real Analysis up to the 299 level
Course Objectives	The main objective of this course is to introduce basic concepts of point set topology, basis and sub-basis for a topology. Further, to study continuity, homeomorphisms, open and closed maps, product and quotient topologies, separation axioms and introduce the notion of connectedness of topological spaces.
Course Learning Outcomes (CLOs) After completing this course, the learner will be able to:	<p>CLO 1: Know about topological spaces, understand neighbourhood system of a point and its properties, interior, closure, boundary, limit points of subsets, and base and sub-base of topological spaces; apply the knowledge to solve relevant exercises.</p> <p>CLO 2: Learn alternate methods of defining a topology using properties of neighbourhood system, interior operator, closed sets, Kuratowski closure operator and know about first and second countable spaces, separable and Lindelof spaces, continuous functions and their characterizations.</p> <p>CLO 3: Know about the Tychonoff product topology and its characterization as the smallest topology such that the projection maps are continuous; connectedness and its relation with continuity.</p> <p>CLO 4: Have understanding of the separation axioms and their</p>

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	<p>System of linear differential equations: Preliminary definitions and notations. Linear homogeneous systems; Definition, Existence and uniqueness theorem, Fundamental matrix, Liouville formula, Adjoint systems, Reduction of the order of a homogeneous system.</p> <p>Non-homogeneous linear systems; Variation of constants formula.</p> <p>Linear systems with constant coefficients.</p> <p>Linear systems with periodic coefficients, Floquet theory.</p> <p>(Relevant portions from the book 'Theory of Ordinary Differential Equations' by Coddington and Levinson)</p>	15
II	<p>System of differential equations; Preliminary concepts, Differential equation of order n and its equivalent system of differential equations, Existence and uniqueness of solutions of system of differential</p>	15

	<p>equations.</p> <p>Dependence of solutions on initial conditions and parameters: Preliminaries, continuity and differentiability of solution of a system of differential equations as a function of initial parameters.</p> <p>(Relevant portions from the book ‘Theory of Ordinary Differential Equations’ by Coddington and Levinson)</p> <p>Extremal solutions: Maximal and Minimal solutions.</p> <p>Upper and Lower solutions, Comparison theorems, Existence via upper and lower solutions.</p> <p>(Relevant portions from the book ‘Textbook of Ordinary Differential Equations’ by Deo et al.)</p>	
III	<p>Autonomous systems; Phase plane, Paths and Critical points, Types of critical points; Node, Center, Saddle point, Spiral point, Stability of critical points, Critical points and paths of linear systems; Basic theorems and their applications.</p> <p>Critical points and paths of non-linear systems; Basic theorems and their applications. Non-linear conservative systems, Potential energy function, Dependence on a parameter.</p> <p>Limit Cycles and periodic solutions, Benedixson’s non-existence criterion, Half-path, Limit set.</p> <p>(Relevant portions from the book ‘Differential Equations’ by S.L. Ross)</p>	15
IV	<p>Stability of linear and non-linear systems: System of equations with constant coefficients, linear equation with constant coefficients.</p> <p>Lyapunov Stability: Stability of solution of a differential system, Positive definite and semidefinite functions, Negative definite and semidefinite functions, Decrescent function,</p> <p>Lyapunov function, Lyapunov’s theorems on stability.</p> <p>Stability of quasi-linear systems. Boundedness of solutions of a second</p>	15

PC-H2 B23-MAT-806 PROGRAMMING LAB -2

With effect from the Session: Scheme 2023-24, Syllabus 2025-26			
Part A - Introduction			
Name of the Programme	B.Sc. /B.A. (Hons.) Mathematics		
Semester	VIII		
Name of the Course	Programming Lab -2		
Course Code	B23-MAT-806		
Course Type	PC-H2		
Level of the course	400-499		
Pre-requisite for the course (if any)			
Course objectives	This is a theory and laboratory course and objective of this course is to acquaint the students with the syntax and tools of MATLAB/SCILAB/Octave for problem solving.		
Course Learning Outcomes (CLO) After completing this course, the learner will be able to:	<p>CLO 1: Learn Script and functions and their types, Solution of Linear differential equations, their characteristic values and fundamental set using MATLAB.</p> <p>CLO 2: Learn Symbolic objects; symbolic variables and expressions; Creation of symbolic math functions and M-file; use of Symbolic Math for differentiation and integration in MATLAB.</p> <p>CLO 3: Learn to solve basic problems of linear algebra like triangularization of matrices, singular value decomposition, eigenvalues, solving system of algebraic equations and system of differential equations, and to plot graphs using MATLAB.</p> <p>CLO 4: Learn to plot Mesh and Surfaces, Printing and Handling of Graphics using MATLAB.</p>		
CLO 5 is related to the practical component.	CLO 5: Learn the practical skills to implement the above mentioned programming concepts through MATLAB/SCILAB/Octave software.

Part B- Contents of the Course

Instructions for Paper- Setter: The examiner will set 9 questions asking two questions from each unit and one compulsory question by taking course learning outcomes (CLOs) into consideration. The compulsory question (Question No. 1) will consist 7 parts covering entire syllabus. The examinee will be required to attempt 5 questions, selecting one question from each unit and the compulsory question. All questions will carry equal marks.

Unit	Topics	Contact Hours
I	Introduction: Data types, Working with vectors and matrices, Arrays, Scripts and Functions Scripts and Functions: Scripts; Functions; Types of functions; Global variables; Passing string arguments to functions; The eval function; Function handles; Function functions; Vectorization; Preallocation. Linear differential equation of order n with constant coefficients; Characteristic roots, Fundamental set.	7
II	Symbolic Math: Symbolic objects; Creating symbolic variables and expressions; The findsym Command; The default symbolic variable; Constructing real and complex variables; Creating abstract functions; Creating symbolic math functions; Creating an M-file. Calculus: Limits; Differentiation; Integration; Symbolic summation; Taylor series; Examples; Simplifications and substitutions, Variable-precision arithmetic examples.	8
III	Linear Algebra: Basic algebraic operations; Linear algebraic operations; Eigenvalues; Jordan canonical form; Singular value decomposition; Eigenvalue trajectories. Solving Equations: System of algebraic equations, System of differential equations. Graphics: Plotting process; Graph components; Figure tools; Arranging	7

Chairman
Deptt. of Mathematics
K.U. KURUKSHETRA

	graphs within a figure; Selecting plot types; Plot editing mode, Using functions to edit graphs; Modifying a graph data source; Modify a graph to enhance the presentation; Printing a graph; Exporting a graph.	
IV	Mesh and Surface Plots: Visualizing functions of two variables; Reading/writing images. Printing and Handle Graphics: Using the handle; Graphics object; Setting object Properties; Specifying the axes or figure, Finding the handles of existing objects.	8
Practicals		Contact Hours
Instructions for Paper- Setter: The examiner will set 3 questions at the time of practical examination by taking course learning outcomes (CLOs) into consideration. The examinee will be required to write and execute 2 programs.		
The following practicals will be done using MATLAB/SCILAB/Octave and record of those will be maintained in the practical Note Book:		90
<ol style="list-style-type: none"> 1. Find the inverse of a given matrix and verify the result by using built-in function. 2. For a given square matrix A, find the eigen-values and eigen-vectors and check the result with the use of built-in function. 3. To solve initial value problems by Runge-Kutta methods and with the use of built-in function. 4. To solve a system of linear equations by Gauss-Seidel method with the use of built-in function. 5. To solve a definite integral using Simpson rules with the use of built-in function. 6. To solve a given algebraic or transcendental equation with the use of built-in function. 7. For given coefficients (a, b, c, d, e), solve the equation $ax^2+by^2+2cx+2dy+e=0$ to plot the corresponding conic, viz. parabola/hyperbola/ ellipse/ circle or else. 8. Write functions to calculate $\sin(x)$ and $\cos(x)$ as series sum of n terms. Use these functions to plot $\sin(x)$, $\cos(x)$, $\sin(x) + \cos(x)$, x in $[0, 2\pi]$, for $n=2, 5, 10, 20$. Display the deviation of curves so plotted from those which are obtained via built-in functions. 9. Plot $\log(x)$, $\exp(x)$, $\sin(x)$ and $\cos(x)$ in a single figure. Use different colours, markers, labels and title for the graph. Also display the legend. 10. Plot (a) parametric curve using ezplot (b) polar curves using ezpolar (c) contours using ezcontour. 11. Use polar coordinates to plot 4 circles in a plot with common centre but of different radii. 12. For 4 spheres with given centre and radii, plot their surfaces as different
