| Course Objectives | The course aims to provide a comprehensive understanding network characterization, design issues, and service mode focusing on the OSI and TCP/IP reference models and th practical applications. It covers data communication concep including performance parameters, transmission med modulation techniques, and switching methods, emphasizing to role of wired and wireless networks. The course delves into the delink layer, exploring protocols, error detection, media access, a IEEE standards, alongside advancements in wireless technolog like Wi-Fi, Wi-Max, and Bluetooth. It further examines to transport and network layers, addressing routing algorithr congestion control, and QoS mechanisms, with a detailed focus IPv4, IPv6, and protocols like TCP and UDP. | | | | | | |
| Course Learning Outcomes (CLO) After completing this course, the learner will be able to: | CLO-1: characterize various types of computer networks and standards along with an insight into the principles of networking by using protocol layering of the Internet and the TCP/IP protoco suite. CLO-2: comprehend the notion of data communication and its | | | | | | |

| Course Objectives | This course provides a comprehensive understanding of data concepts, including the three-schema architecture, relat models, and the ER model. It covers SQL and PL/SQL for data management, exploring queries, constraints, and adva functions. Students will learn relational algebra, normaliz techniques, and query optimization to enhance database design performance. The course also addresses transaction process concurrency control, and database recovery, emphas reliability, consistency, and security in database systems. | | | | |
| Course Learning Outcomes (CLO) After completing this course, the learner will be able to: | CLO-3: Analyze relational algebra operations normalization techniques to optimize database structudata integrity. CLO-4: Demonstrate knowledge of transaction concurrency control methods, and database recovery maintain database reliability and security. | sign effective ies, including and aggregate and apply are and ensure processing, techniques to | | | |

| Course Learning Outcomes (CLO) After completing this course, the learner will be able to: | This course aims to provide hands-on experience in building web applications and understanding networking concepts. Part A focuses on mastering server-side development with Node.js and Express.js, enabling students to design efficient applications integrated with databases like MongoDB. Part B emphasizes networking principles, offering insights into data transmission, error detection, routing, and network protocols through programming and simulation, preparing students for real-world applications in web development and network administration. CLO-1: and implement server-side applications using Node.js and learner Express.js, including handling HTTP methods, managing file operations, and building RESTful APIs integrated with MongoDB for CRUD operations and authentication. CLO-2: Demonstrate the ability to use Node.js core modules, custom modules, middleware, and debugging tools to build dynamic, efficient, and error-resilient web applications. CLO-3: Analyze and implement networking concepts and protocols, including OSI and TCP/IP models, socket programming, and data transmission methods, using Python or C++. CLO-4: Apply algorithms and techniques in networking, such as error detection (CRC), routing (Dijkstra's algorithm), and flow control | | | | |

sends a request to the server and displays the response in the browser.3) Implement a program to demonstrate the request-response cycle by logging HTTP request headers and returning a JSON response.

Rapublis

| 4) | Compare server-side and client-side operations by creating a simple application where the server processes data and the client displays it. | |
|-------------|--|---------------------------------------|
| 5) | Install Node.js and initialize a new project using npm. Create and manage packages using package.json. | |
| 6) | Write a program using Node.js core modules like fs and os to read system | |
| 7) | information and save it to a file. Create a custom module for string manipulation (e.g., reversing, converting to | |
| 8) | uppercase) and use it in a Node.js script. Write a Node.js program to read and write data to a text file asynchronously, logging | |
| 9) | success or error messages to the console. Create a script to list all files and directories in a specified folder and display them | |
| 10) | hierarchically. Implement a program that manages a directory: creating it if it doesn't exist, adding | |
| 11) | files, and deleting files. Build a basic HTTP server in Node.js that supports different HTTP methods (GET, POST BUT DELETE) and have each memory. | |
| 10) | POST, PUT, DELETE) and logs each request. | |
| | Create a server that serves static files (e.g., HTML, CSS, JS) from a public directory. | |
| , | Use the EventEmitter class to create and emit custom events, such as notifying users when a file operation is completed. | |
| | Implement a real-time data handler using events, simulating a live stock ticker system. | |
| 15) | Create a script that performs file operations and uses try-catch blocks to handle file-not-found errors gracefully. | |
| 16) | Debug a Node.js script using nodeinspect and Chrome DevTools, identifying and fixing a logical error. | |
| 17 | Create a basic Express.js application to handle routing for /home, /about, and | |
| , | /contact with respective responses. | |
| 18) | Develop a RESTful API using Express.js to manage a list of books (CRUD operations). | |
| 19) | Set up a server-side rendering engine (EJS) to dynamically generate HTML pages with user data. | |
| 20) | Implement custom middleware in an Express.js application to log request details and handle errors. | |
| 21) | Implement a JWT-based authentication system for a RESTful API, allowing users to register and log in. | |
| 22) | Create an Express.js application to demonstrate session management for user login and logout. | |
| 23) | Install MongoDB locally and create a database called school. Add a students collection and insert sample documents. | |
| 24) | Use MongoDB Atlas to create a cloud-hosted database and connect to it using Node.js. | |
| 25) | Write a script to query MongoDB for documents with specific conditions, such as retrieving students with grades above 80. | |
| 26) | Develop a Node.js script to perform CRUD operations on a products collection in MongoDB. | |
| 27 | Create an Express.js application that connects to MongoDB and exposes APIs for | |
| | CRUD operations on a tasks collection. Add indexes to a MongoDB collection and demonstrate their impact on query | |
| <i>2</i> 8) | performance by measuring execution time before and after indexing. | |
| 29) | Write a script that creates a compound index on multiple fields in a collection and tests its effectiveness with specific queries. | |
| | Part-B | 60 |
| 1) | Compare the OSI and TCP/IP reference models by creating a document that maps | (Lab hours include |
| 2) | the functionality of each layer. | instructions for |
| 2) | Develop a Python script to simulate data transmission using TCP/IP sockets between a client and server. | writing programs and demonstration |

| execute 2 questions. | | | | | | | |

- 1) Set Operations: Write a program to perform union, intersection, difference, and (Lab hours include symmetric difference on two sets. instructions for writing
- 2) Cardinality: Implement a program to calculate the cardinality of a given set.
- Binary Relation Properties: Write a program to check whether a given binary 3) relation is reflexive, symmetric, asymmetric, or transitive.
- 4) Hasse Diagram: Create a program to generate a Hasse diagram for a partial ordering relation.
- 5) Lattices: Write a program to verify whether a given set with a partial order forms a lattice.
- 6) Functions: Implement a program to check whether a function is injective, surjective, or bijective.
- Recursive Functions: Write a program to compute the factorial of a number using 7) recursion and apply it to solve problems using pigeonhole principles.
- 8) Pigeonhole Principle: Write a program to prove the pigeonhole principle for a given input set.

programs and demonstration

by a teacher and for running

the programs on computer

by students.)

| 11) Eigenvalues and Eigenvectors: Write a program to eigenvectors of a square matrix. | comp | ute the eigenvalues and | | | | | |
|---|---------|---------------------------|---------------------------------|--|--|--|--|
| 12) System of Linear Equations: Create a program to solv using Gaussian elimination. | 5 | | | | | | |
| 13) Diagonalization: Write a program to diagonalize a square matrix if possible. | | | | | | | |
| 14) Interpolation: Implement a program to perform Lagrange or Newton interpolation for a given set of points. | | | | | | | |
| 15) Numerical Integration: Write a program to compu- function using the trapezoidal or Simpson's rule. | | | | | | | |
| 16) Numerical Differentiation: Create a program to fine using finite difference methods. | d the | derivative of a function | | | | | |
| 17) Data Presentation: Write a program to create a histog set. | | | | | | | |
| 18) Measures of Central Tendency: Implement a progra and mode for a given data set. | | | | | | | |
| 19) Measures of Dispersion: Write a program to comp mean deviation, standard deviation, and coefficient of | | 0 1 | , | | | | |
| 20) Moments, Skewness, and Kurtosis: Create a program distribution and determine its skewness and kurtosis. | | culate the moments of a | L | | | | |
| 21) Tabular Representation: Write a program to present user input (quantitative or qualitative). | data i | n tabular form based on | | | | | |
| 22) Scatter Diagram: Write a program to generate a scat compute the correlation coefficient. | ter pl | ot for bivariate data and | 1 | | | | |
| 23) Regression: Implement a program to compute the regression line and predict values based on the mode | | tion of a simple linear | • | | | | |
| 24) Polynomial Fitting: Write a program to fit a polynomial of least squares. | mial c | urve using the principle | | | | | |
| 25) Exponential Curve Fitting: Create a program to fit as data set. | n expo | onential curve to a given | | | | | |
| 26) Probability Calculations: Write a program to comput statistical, and axiomatic definitions. | - | - | | | | | |
| 27) Conditional Probability: Implement a program to cal and verify the laws of addition and multiplication. | lculate | e conditional probability | 7 | | | | |
| 28) Bayes' Theorem: Write a program to solve problems | - | - | | | | | |
| 29) Random Events Simulation: Create a program to s | imula | te random experiments, | , | | | | |
| generate a sample space, and calculate probabilities. | luatio | n Mathada | | | | | |
